

NI/CU POLYESTER CONDUCTIVE FABRIC TAPE

Laird's Conductive Fabric Tape 85785 is composed of metallized (nickel/copper) polyester based fabric and conductive pressure sensitive adhesive (PSA). The fabric layer offers excellent performance for EMI/RFI shielding and electrical grounding, while the adhesive layer makes it convenient to apply on most metal or plastic surfaces. This relatively stiff fabric tape is ideal for die cut and hole punched applications.

FEATURES

- RoHS compliant
- Halogen-free per IEC-61249-2-21 standard
- Low surface resistivity of $< 0.04 \Omega/\square$ provides excellent conductivity
- Shielding effectiveness of >75 dB across a wide spectrum of frequencies

COMPOSITION OF PRODUCT

APPLICATION TECHNIQUES

1. Bond strength is dependent upon the amount of adhesive-to-surface contact developed. Firm application pressure develops better adhesive contact and improves bond strength.
2. To obtain optimum adhesion, the bonding surfaces must be clean, dry and well unified.
3. The temperature of tape application is recommended 21°C to 38°C.
4. Not designed for cable wrapping or applications requiring high shear adhesion. Please contact your Laird Sales representative for a more suitable product.
